

Great resources for little gears

Technology and investment on personnel for high quality mechanisms

Forty years of activity celebrated just now, for a story made of deep knowledge and continuous evolution. Specialized in the creation of small gears and of special precision mechanisms, Microingranaggi is living through a decisively positive moment. The mechanics workshop in Buccinasco, in fact, has known over the years how to stay at the top of its sector. “We have had the ability of marrying the best of

in fact, reached through clients or directly, represent today the best opportunity. For this reason Microingranaggi works very hard to spread its own brand, participating in international trade fairs and taking advantage of channels such as internet and the social network. “In fact, we live the more and more thanks to relationships, as long as the substance, that is the product, is valid”. The pride and joy of the

control. All this without forgetting that the most precious resource is personnel. “In any company, it is the people who make the difference”. And just for this, Microingranaggi invests heavily in training: last year it actually held 14 training courses and it is still hiring, thereby giving a signal which goes against the trend with respect to the asphyxiated national situation. “We do not wish to renounce investments on

The team

mechanical tradition and the most innovative of technologies – underlines the owner, Stefano Garavaglia – often ahead of time. We have built, according to the input of the market, a complete structure which allows us today to be competitive on many fronts, offering customized products for applications in the most varied of sectors”. The company operates mainly on the Italian market with clients who are mostly experienced exporters. But Microingranaggi has been acquiring also an ever greater number of places on the most competitive foreign markets such as, for example, Germany and Switzerland. Foreign countries,

structure at Buccinasco are the technical design office, the quality control measurement department (which also does measurements for third parties), and the assembly department, created as a result of the increasing request from the market for subjects able to handle pre-assembly processes for the components. Continual technological updating plays a fundamental role for a company which makes quality of the product its distinguishing characteristic. In December, for example, a machine that does automatic measuring was installed in the factory to allow for the further improvement of the checking standards for product

several fronts, including employment, because it is in our Dna and because, - concludes Garavaglia – fortunately, demand for our products is strong. The sector in general is showing some timid positive signals but we are coming out of a period of years in which many companies, as a consequence reflecting the difficulties encountered, have run to cut down spending, which then reflects on quality. This is a tendency which we, luckily, have never been forced to adopt. We have continued with our usual philosophy, which is the opposite, and never, as much as in the present, can we say that we have truly made the right choice”.
